

Mohammadreza Naderi Akhormeh

Computer Engineering Student

Iran naderi.mohammadreza@outlook.com naderidev

naderidev.ir naderidev

Computer Engineering student at the University of Yasouj. Interested in artificial intelligence, machine learning, computer vision, and intelligent robotic systems. Experienced in programming, teaching assistance, and web development, with an interest in applying AI techniques to real-world problems. Seeking to deepen my knowledge of AI through graduate studies and research.

Education

Bachelor of Science in Computer Engineering, *University of Yasouj* 10/2023 – Present
Yasouj, Iran

- GPA: 18.39/20
- Relevant Interests: Artificial Intelligence, Machine Learning, Deep Learning, Computer Vision, and Robotics.

Awards

First-Ranked Student in Computer Engineering, *University of Yasouj* 2026
Ranked 1st among 77 students in the 2023 Computer Engineering admission cohort at the University of Yasouj, based on academic performance.

Membership in the Iran National Elites Foundation, 2025
Iran National Elites Foundation (INEF)
Participating in the 9th Edition of the Problem-Oriented Research and Technology Core Groups Program through a research project entitled **"Protecting Natural Areas Using Artificial Intelligence and Satellite Remote Sensing Imagery."**

Professional Experience

Freelance Web Developer, *Self-Employed* 09/2024 – Present
Yasouj, Iran

- Developed and maintained website backends using PHP and the Laravel framework.
- Implemented server-side logic and backend functionality based on project requirements.

Teaching Assistant – Fundamentals of Computer and Programming, 09/2024 – 06/2025
University of Yasouj University of Yasouj

- Served as a teaching assistant for two consecutive semesters.
- Assisted students in understanding fundamental programming concepts and problem-solving techniques.
- Supported students with programming exercises, assignments, and course-related questions.

Projects

Graph Routing and Visualization Application
Developed a graphical application for graph-based route finding and visualization as part of the Discrete Mathematics course.
Implemented graph representation and route-search logic to find paths between nodes.
Project link: https://github.com/naderidev/graph-routing

Numerical Simulation of Heat Distribution
Developed an interactive simulation of heat distribution based on the heat equation as part of the Engineering Mathematics course.
Implemented a browser-based interface to visualize temperature distribution and its changes over time.
Project link: https://github.com/naderidev/heat-equation-simulation

People Clothing Segmentation Using Deep Learning

- Developed a computer vision model for semantic segmentation of clothing in images of people.
- Achieved 87% validation accuracy during model evaluation.
- Applied image segmentation techniques to identify and distinguish clothing regions in images.

Project link: https://www.kaggle.com/code/mohammadrezanaderia/people-clothing-segmentation-with-87-val-accuracy

Autonomous Turtle Control and Target Tracking Using ROS 2

- Developed a robotic simulation using ROS 2 and the Turtlesim environment.
- Implemented robot control and target-tracking logic to navigate toward designated targets.
- Applied ROS 2 concepts for robot communication and modular software development.

Project link: https://github.com/naderidev/ros2-catch-them-all
